

Incident handler's journal

Instructions

As you continue through this course, you may use this template to record your findings after completing an activity or to take notes on what you've learned about a specific tool or concept. You can also use this journal as a way to log the key takeaways about the different cybersecurity tools or concepts you encounter in this course.

Date: Record the date of the journal entry.	Entry: 1
Description	A small U.S. healthcare clinic experienced a ransomware attack that severely disrupted business operations. The attackers gained access through targeted phishing emails containing a malicious attachment. After an employee downloaded the attachment, malware was installed and ransomware encrypted critical computer files, including files containing medical records. A ransom note was displayed demanding money in exchange for the decryption key.
Tool(s) used	None
The 5 W's	Capture the 5 W's of an incident. ● An organized group of unethical hackers who target healthcare and transportation organizations. ● Attackers sent targeted phishing emails containing a malicious attachment. After the attachment was downloaded, ransomware was

	deployed and encrypted the organization's critical files, preventing employees from accessing important data and software. ● The incident occurred on Tuesday at approximately 9:00 a.m. ● The incident occurred within the computer network and systems of a small U.S. healthcare clinic that provides primary-care services. ● The attackers targeted the healthcare organization to gain unauthorized access to its systems, encrypt critical files, and demand money in exchange for the decryption key.
Additional notes	The ransomware attack caused a major disruption to the clinic's operations because employees could not access medical records and other critical files. Further investigation should determine which systems were affected, whether patient information was accessed or stolen, and what security measures can be implemented to prevent similar attacks.
